

# Contour Fiberboard Forms

## The Better Base to Build On

Contour fiberboard forms are fabricated by convolute winding and gluing of a special fiberboard material onto various forming mandrels.

Fiberboard Forms are the ideal base material for: furniture, speaker, display, kiosk, and POP manufacturers.

They offer the perfect blend of strength and style to your products – and often prove to be more versatile than wood in meeting your design challenges:

- Strong, lightweight fiberboard forms serve as a cost-effective alternative to wood base components.
- Ideal for use with high-pressure laminates, paints, lacquers and fabrics.
- Versatile standard and custom shapes and sizes available.

Geometric forms help reduce production costs by eliminating the need to hand fabricate shapes. They can replace costly wood components and provide you with a durable, lightweight base on which to build.

### Manufacturing Information

- Standard length of contour forms is 56" and 62"
- All other lengths available upon special order.
- Standard wall callipers are: .360", .420", and .480".
- Wall callipers can be specified by the customer in multiples of .030".

### Ideal Uses

POP Displays  
Speakers

Table Bases  
Concrete Forms

Furniture  
Chairbacks

### Standard Shapes

Rounds  
Squares  
Trapezoids

Quarter Rounds  
Triangles  
Hexagon

Ovals  
Pentagons  
Irregular
